

# Creating a RESTful API using express.js and creating a database and index in MongoDB.

**Name** : YALAMANDALA NAGARJUNA

**Email Id** : arjunchinna616@gmail.com

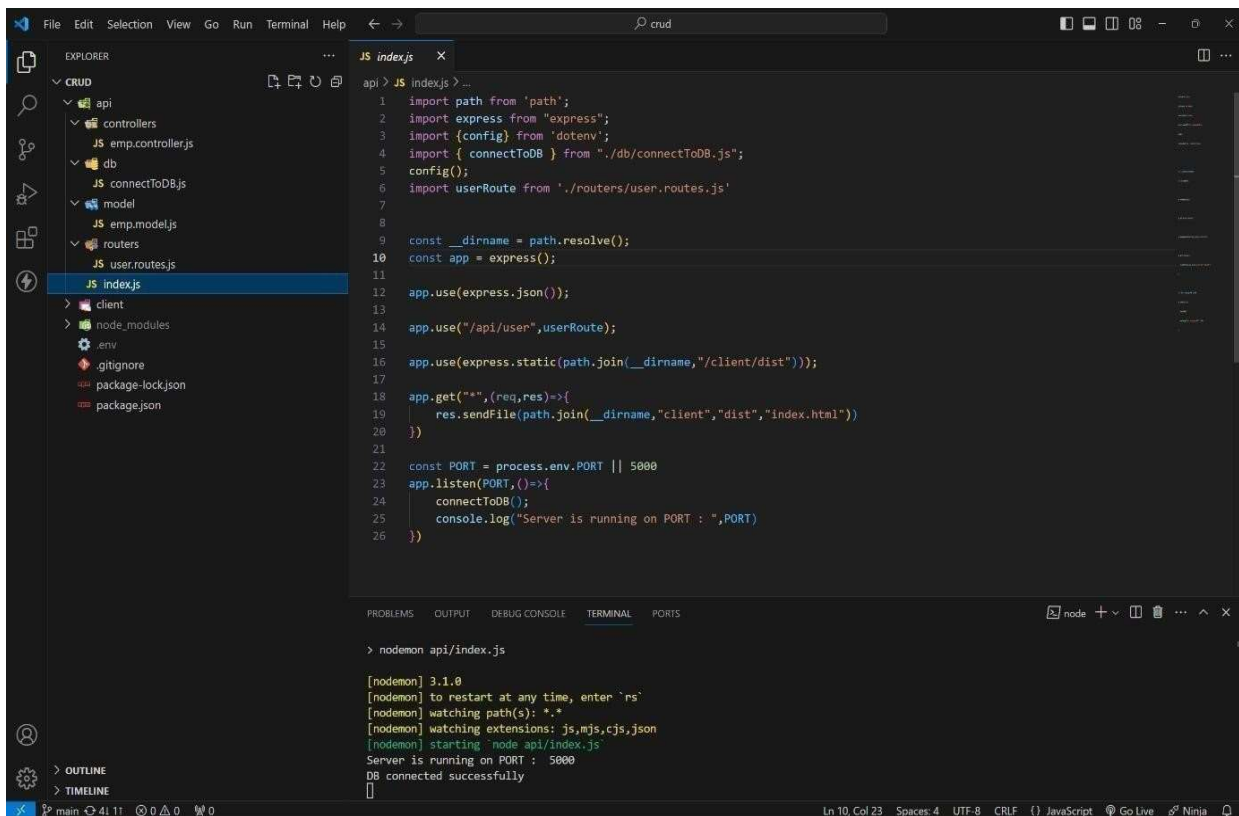

**Phone no** : 6304550803

**Roll NO** : 20HU1A0456

**College Name:** Chebrolu Engineering College

**Source Code:**

**index.js file :**

The screenshot shows a VS Code editor window with a file explorer on the left and a code editor in the center. The file explorer shows a project structure with folders like 'api', 'controllers', 'db', 'model', 'routers', and 'client'. The 'api' folder is expanded, showing files like 'index.js', 'controller.js', 'model.js', 'routes.js', and 'user.routes.js'. The 'index.js' file is selected and its content is displayed in the code editor. The code is a Node.js script that uses Express.js to create a RESTful API. It imports necessary modules, configures the app, and sets up routes. The terminal at the bottom shows the command 'nodemon api/index.js' being executed, and the output indicates that the server is running on port 5000 and connected to MongoDB.

```
api > JS indexjs > ...
1  import path from 'path';
2  import express from 'express';
3  import {config} from 'dotenv';
4  import { connectToDB } from './db/connectToDB.js';
5  config();
6  import userRoute from './routers/user.routes.js'
7
8
9  const __dirname = path.resolve();
10 const app = express();
11
12 app.use(express.json());
13
14 app.use("/api/user",userRoute);
15
16 app.use(express.static(path.join(__dirname,"client/dist")));
17
18 app.get("*",(req,res)=>{
19   res.sendFile(path.join(__dirname,"client","dist","index.html"))
20 })
21
22 const PORT = process.env.PORT || 5000
23 app.listen(PORT,()=>{
24   connectToDB();
25   console.log("Server is running on PORT : ",PORT)
26 })
```

## MODEL:

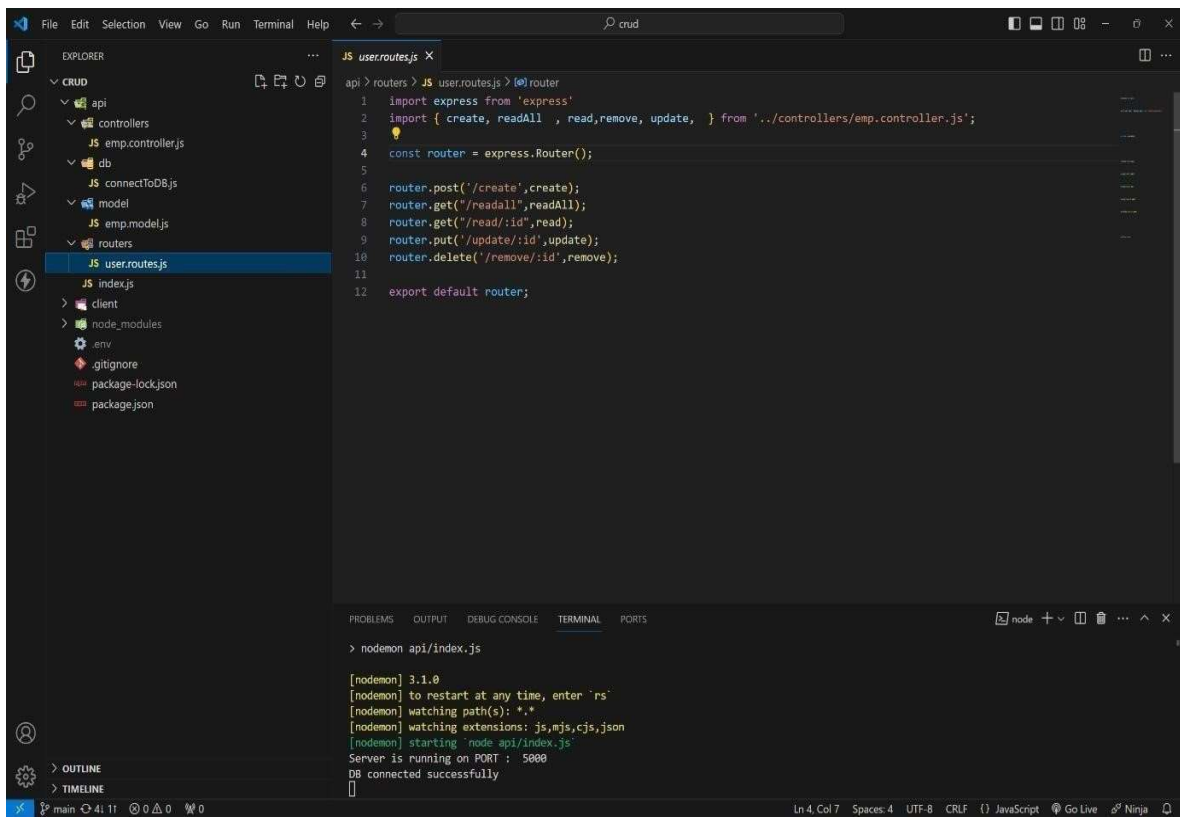

```
api > model > JS emp.model.js > userSchema > role
1 import mongoose from 'mongoose';
2
3 const userSchema = new mongoose.Schema({
4   username:{
5     type:String,
6     unique:true,
7     required:true
8   },
9   empname:{
10    type:String,
11    required:true
12  },
13  email:{
14    type:String,
15    required:true
16  },
17  role:{
18    type:String,
19    required:true
20  },
21  salary:{
22    type: Number,
23    required: true,
24  }
25 },{timestamps:true})
26
27 const Emp = mongoose.model("User",userSchema);
28
29 export default Emp;
```

```
> nodemon api/index.js

[nodemon] 3.1.0
[nodemon] to restart at any time, enter 'rs'
[nodemon] watching path(s): *.*
[nodemon] watching extensions: js,mjs,cjs,json
[nodemon] starting 'node api/index.js'
Server is running on PORT : 5000
DB connected successfully
```

## ROUTES:

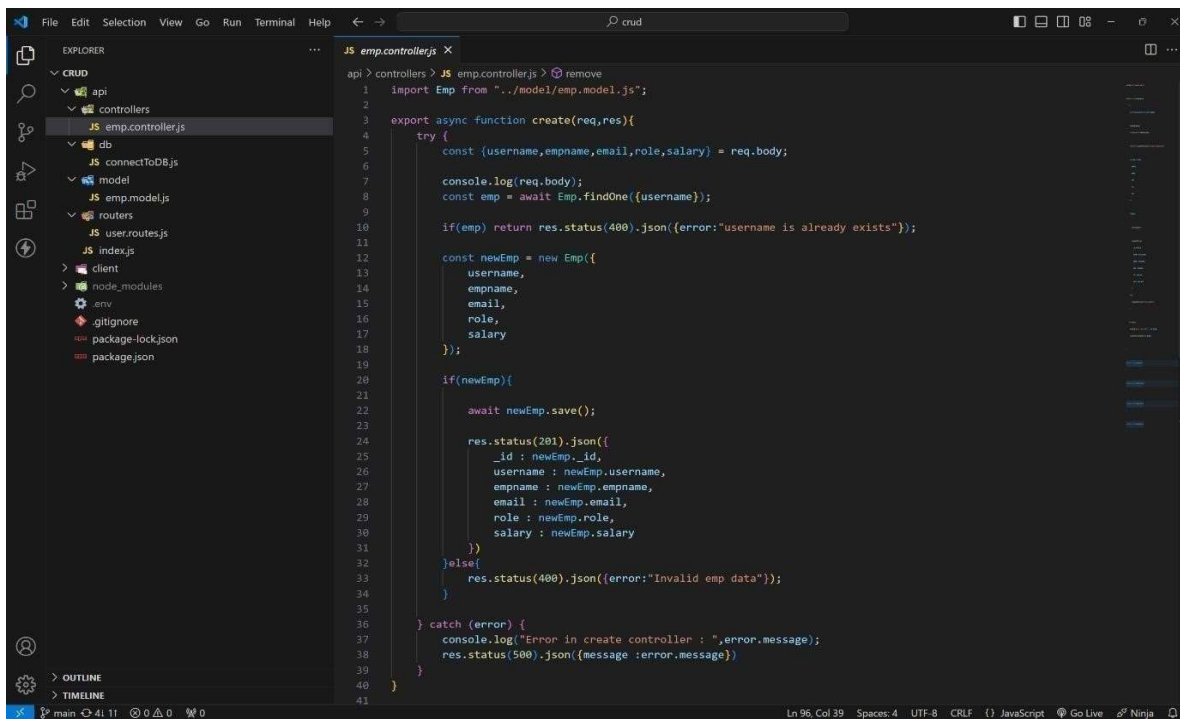

The screenshot shows a VS Code editor with a project structure on the left. The file explorer shows a directory named 'crud' containing 'api', 'controllers', 'db', 'model', 'routers', and 'client'. The 'routers' directory is expanded, showing 'user.routes.js' and 'index.js'. The 'user.routes.js' file is open in the editor, showing the following code:

```
1 import express from 'express'
2 import { create, readAll, read, remove, update, } from '../controllers/emp.controller.js';
3
4 const router = express.Router();
5
6 router.post('/create',create);
7 router.get('/readall',readAll);
8 router.get('/read/:id',read);
9 router.put('/update/:id',update);
10 router.delete('/remove/:id',remove);
11
12 export default router;
```

The terminal window at the bottom shows the command 'nodemon api/index.js' being executed. The output indicates that the server is running on port 5000 and the database is connected successfully.

## CONTROLLERS: CREATE:

The screenshot shows a VS Code editor with the same project structure. The file explorer shows the 'controllers' directory expanded, showing 'emp.controller.js'. The 'emp.controller.js' file is open in the editor, showing the following code:

```
1 import Emp from '../model/emp.model.js';
2
3 export async function create(req,res){
4   try {
5     const {username,empname,email,role,salary} = req.body;
6
7     console.log(req.body);
8     const emp = await Emp.findOne({username});
9
10    if(emp) return res.status(400).json({error:"username is already exists"});
11
12    const newEmp = new Emp({
13      username,
14      empname,
15      email,
16      role,
17      salary
18    });
19
20    if(newEmp){
21      await newEmp.save();
22
23      res.status(201).json({
24        _id : newEmp._id,
25        username : newEmp.username,
26        empname : newEmp.empname,
27        email : newEmp.email,
28        role : newEmp.role,
29        salary : newEmp.salary
30      });
31    }else{
32      res.status(400).json({error:"Invalid emp data"});
33    }
34  } catch (error) {
35    console.log("Error in create controller : ",error.message);
36    res.status(500).json({message :error.message})
37  }
38 }
39
40 }
```

## READALL:

```

110 }
```

UPDATE:

```
api > controllers > JS emp.controller.js > remove
1  import Emp from "../model/emp.model.js";
2
3  > export async function create(req,res){ ...
40 }
41
42 > export async function read(req,res){ ...
58 }
59
60 > export async function readAll(req,res){ ...
75 }
76
77 export async function update(req,res){
78   try {
79     const {id} = req.params;
80
81     const emp = await Emp.findById({_id:id});
82
83     if(!emp) return res.status(404).json({error:"emp not found!"});
84
85     const newEmp = await Emp.findByIdAndUpdate({_id:id},{...req.body},{new:true});
86
87     res.status(201).json({
88       newEmp
89     })
90   } catch (error) {
91     console.log("Error in create controller : ",error.message);
92     res.status(500).json({error:"Internal server Error"})
93   }
94 }
95
96 > export async function remove(req,res){ ...
110 }
```

## DELETE:

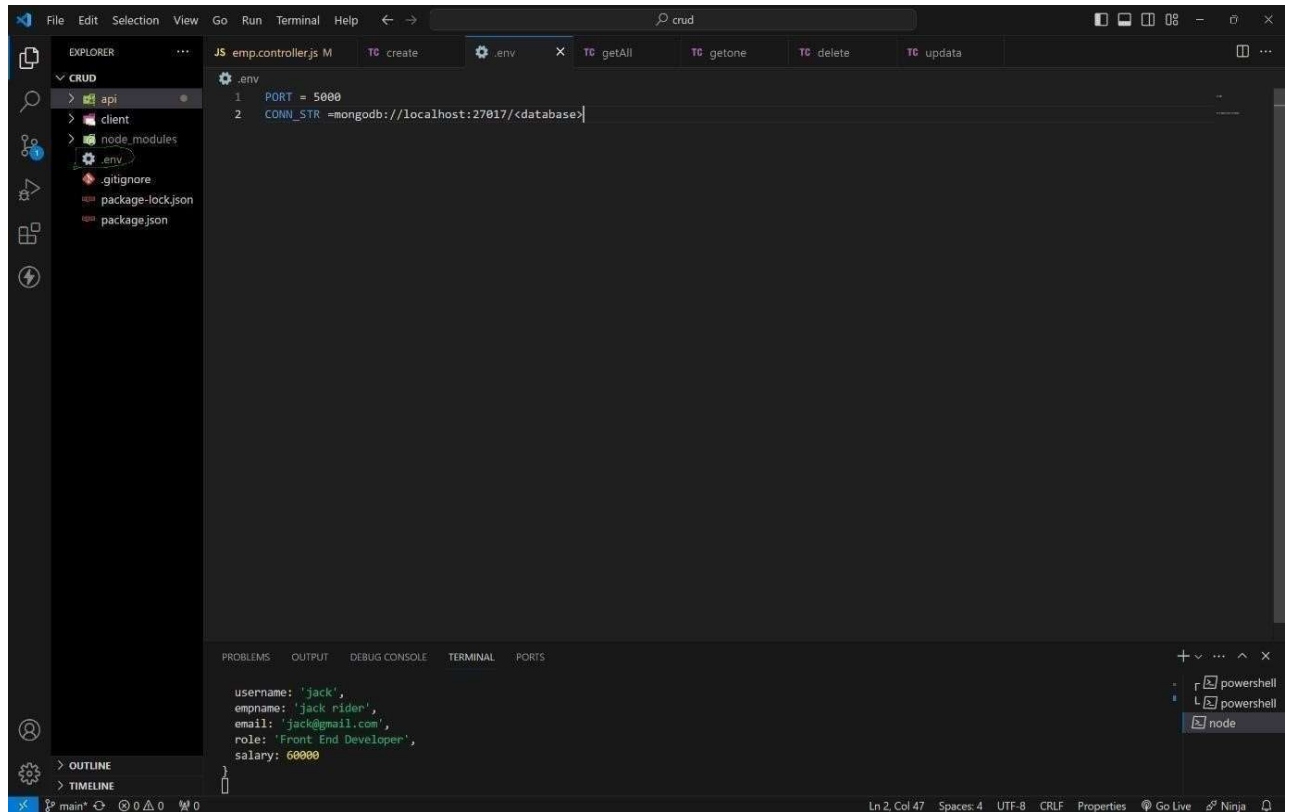

```
api > controllers > JS emp.controller.js > remove
1  import Emp from "../model/emp.model.js";
2
3  > export async function create(req,res){ ...
40 }
41
42 > export async function read(req,res){ ...
58 }
59
60 > export async function readAll(req,res){ ...
75 }
76
77 > export async function update(req,res){ ...
94 }
95
96 export async function remove(req,res){
97   try {
98     const {id} = req.params;
99
100     await Emp.findByIdAndDelete({_id:id});
101
102     res.status(201).json({
103       id,
104       message : `deleted successfully..`,
105     })
106   } catch (error) {
107     console.log("Error in create controller : ",error.message);
108     res.status(500).json({error:"Internal server Error"})
109   }
110 }
```

## HOW TO RUN ON LOCALLY:

- 1 . Create a folder as any name.
- 2 . Open that folder in any code editor (vs code).
- 3 . Open terminal (ctrl + ~) on code editor.
- 4 . Type this code to get code locally. `git clone https://github.com/4727yesuraju/crud.git`
- 5 . Now move to crud folder (`cd crud` in terminal)
- 6 . Ignore client folder.
- 7 . Here crud is root folder.
- 8 . In root folder create a `.env` file and create a `PORT` and `CONN_STR` variables and assign value.

ex : `PORT = 3000` ( commonly any number between 3000 - 8080).

`CONN_STR = your mongodb_connection_string`

--- trouble in above process?: simply

paste this code in `.env` file.

`PORT = 5000`

`CONN_STR=mongodb+srv://4727yesuraju:rough@cluster0.wbclvtg.mongodb.net`

/?retry Writes=true&w=majority&appName=Cluster0

9 . After in terminal (in crud folder as root folder) type this command to server.

npm i (installing all dependencies) npm run dev (to run server)

10 . if you get below message in terminal then your server will running Successfully

```
PS C:\Users\4727y\OneDrive\Desktop\internshala\crud> npm run dev

> crud@1.0.0 dev
> nodemon api/index.js

[nodemon] 3.1.0
[nodemon] to restart at any time, enter `rs`
[nodemon] watching path(s): *.*
[nodemon] watching extensions: js,mjs,cjs,json
[nodemon] starting `node api/index.js`
Server is running on PORT : 5000
DB connected successfully
```

route and its functionality:

For this use any API using tools like Postman or Thunder Client. i

use THUNDER CLIENT.

CREATE ROUTE :

1 . This route is used to create a new employee in database with a below fields. username,

empname, email, role, salary

2 . in thunder client click on new request and select this options method as post url as

http://localhost:5000/api/user/create

pass this json data as a body as your required value.

{

"username": "jack",

"empname": "jack rider",

"email": "jack@gmail.com",

"role": "Front End Developer",

"salary": 60000

}

3 . finally press send to insert data in mongodb data base and get a inserted data as a response.

4 . If user is already in db it will return User is already exist as response.

for more details visit below output images...

#### **READONE:**

1 . This route is used to read specific user info by passing that user id as a param.

method as get

url as

<http://localhost:5000/api/user/read/65ed7b3d76e1dcc9a51654ca>

2 . After sending you will get that specific user details as response.

#### **READALL :**

1 . Read all route is used to get all the user data existing in the mongodb data base .

method as get

url as <http://localhost:5000/api/user/readall>

2 . After sending you will get that all user details as response.

#### **UPDATE :**

1 . This route is used to update specific user by passing that user id as a param. method as put

url as <http://localhost:5000/api/user/update/65ed7b3d76e1dcc9a51654ca>

2 . After sending you will get updated user details as response.

#### **DELETE :**

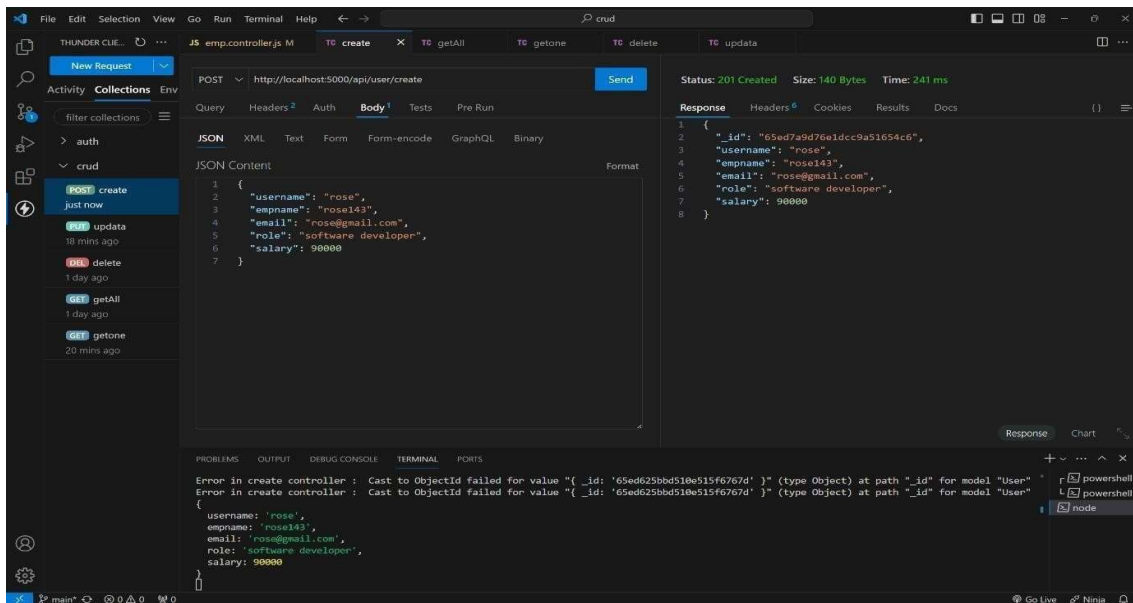

1 . This route is used to delete specific user by passing that user id as a param. method as delete

url as <http://localhost:5000/api/user/delete/65ed7b3d76e1dcc9a51654ca> 2 . After sending you will deleted successfully as response.

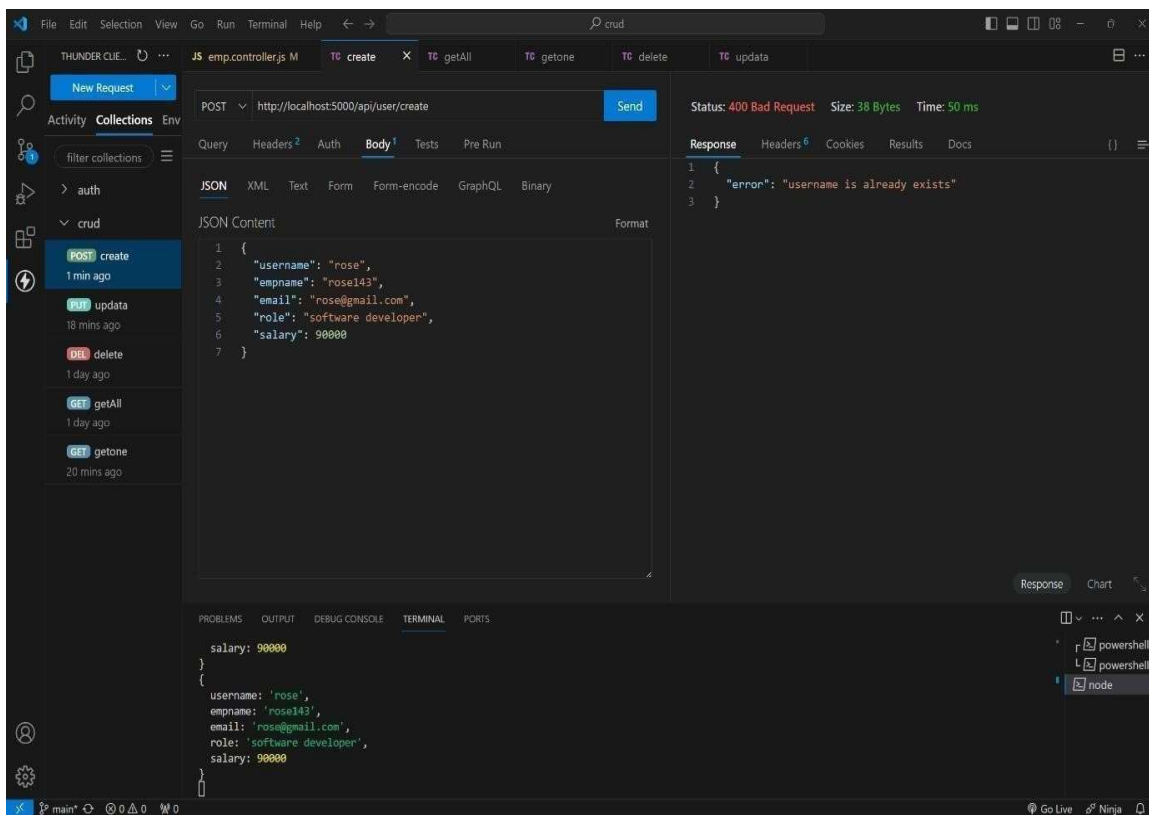

#### **OUTPUT :**

#### **CREATE A NEW USER :**

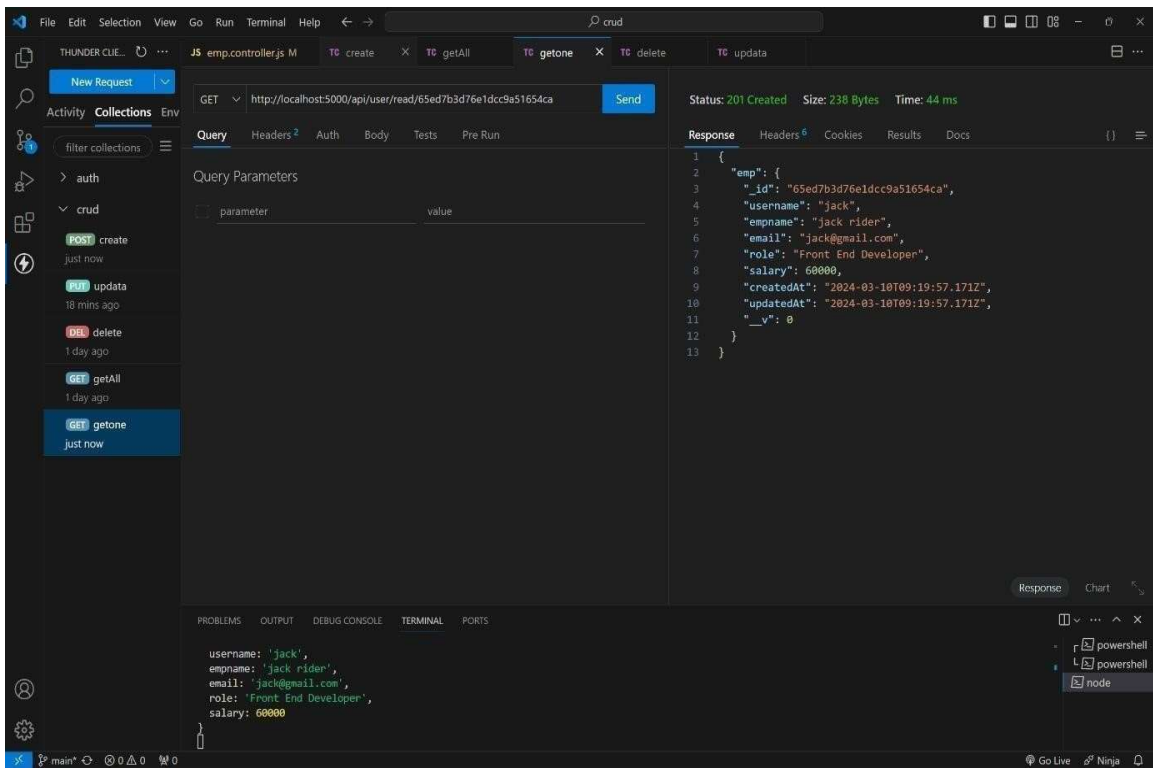

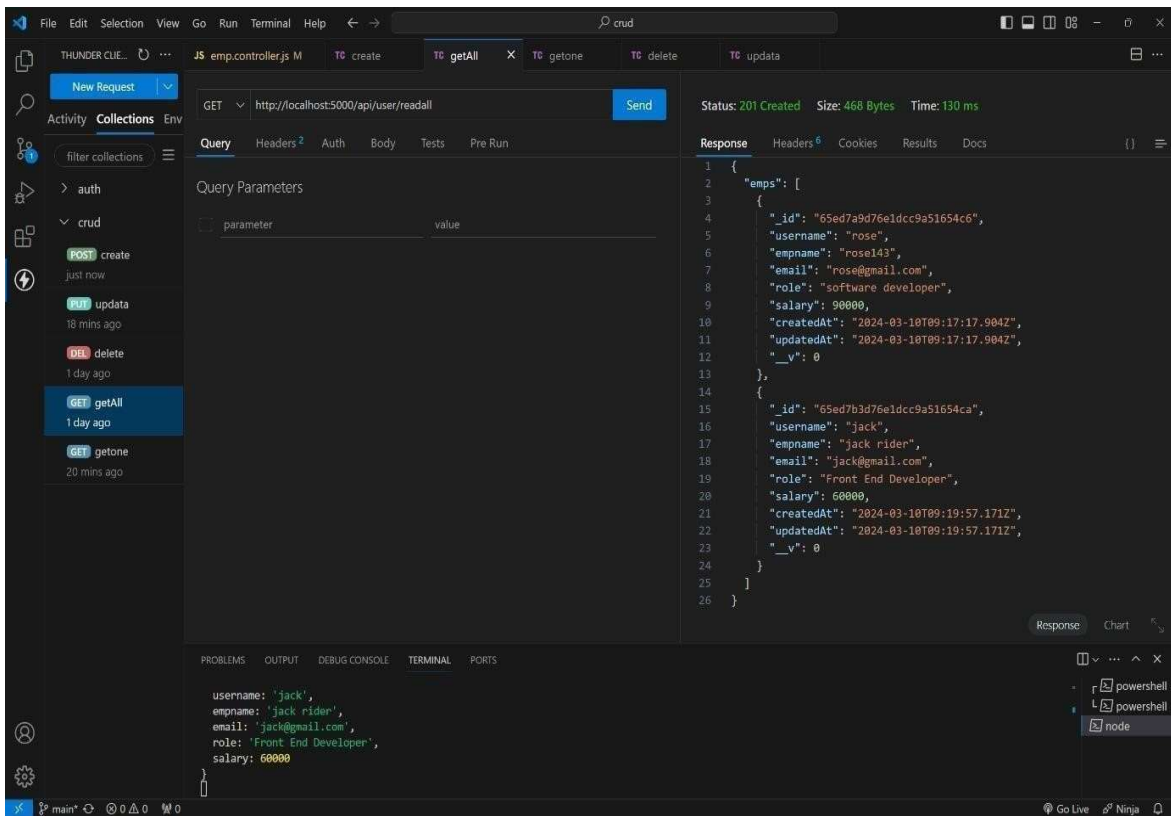

**CREATING USER WITH EXISTING USERNAEM :**

**READONE :**

READ ALL :

UPDATE :

Thunder Client interface showing a PUT request to `http://localhost:5000/api/user/update/65ed7b3d76e1dcc9a51654ca`. The request body is a JSON object:

```
1 {
2   "empname": "jack rider",
3   "email": "jack123@gmail.com",
4   "role": "MERN STACK Developer",
5   "salary": 100000
6 }
```

The response is a 201 Created status with a JSON object:

```
1 {
2   "newEmp": {
3     "_id": "65ed7b3d76e1dcc9a51654ca",
4     "username": "jack",
5     "empname": "jack rider",
6     "email": "jack123@gmail.com",
7     "role": "MERN STACK Developer",
8     "salary": 100000,
9     "createdAt": "2024-03-10T09:19:57.171Z",
10    "updatedAt": "2024-03-10T09:22:55.106Z",
11    "__v": 0
12  }
13 }
```

The terminal shows an error in the create controller:

```
empname: 'jack rider',
email: 'jack@gmail.com',
role: 'Front End Developer',
salary: 600000
}
Error in create controller : Cast to ObjectId failed for value "{ _id: '65ed625bbd510e515f6767d' }" (type Object) at path "_id" for model "User"
```

## DELETE :

Thunder Client interface showing a DELETE request to `http://localhost:5000/api/user/remove/65ed7b3d76e1dcc9a51654ca`. The response is a 201 Created status with a JSON object:

```
1 {
2   "id": "65ed7b3d76e1dcc9a51654ca",
3   "message": "deleted successfully.."
4 }
```

The terminal shows the server running on port 5000:

```
Node.js v20.11.0
[nodemon] app crashed - waiting for file changes before starting...
[nodemon] restarting due to changes...
[nodemon] starting node api/index.js
Server is running on PORT : 5000
DB connected successfully
```
